Professional Profile

A motivated and enthusiastic, Bachelor of Technology graduate specialized in Software Engineering. I completed my degree at Kings Own Institute, Sydney NSW. I currently finished attending MERN Stack technology for full stack web app development bootcamp at Dented Code Academy. I am looking for a Full Stack Developer role where I can apply my skills and expand my practical knowledge whilst growing professionally.

My goal is to deepen my experience in the real-world software industry. I have completed projects using the skills I have gained so far and ongoing. I am equipped with great communication skills, and I am fluent in English.

Skills

- Excellent in HTML, CSS, JavaScript, Bootstrap, SASS, ReactJS, NodeJS with ExpressJS, REST API, MongoDB with Mongoose.
- Experience with photoshop.
- Have good knowledge on Git and GitHub
- Dedicated and logical problem-solving skills, Good Communication, and a Team player

Education

MERN Stack Development Boot Camp

March 2022 – October 2022

Dented Code Academy, Sydney, Australia

Studying and advancing on skills to become Full Stack Developer

Bachelors in Information Technology

July 2020 – October 2022

Kings Own Institute (KOI), Sydney, Australia

Advanced on the study of Computer programming, algorithms and technologies

Advanced Diploma in Computer Systems Technology

April 2018 – April 2020

International Institution of Business and Information Technology (IIBIT), FED UNI (affl), Sydney Australia

Got introduced on the scope, fundamentals, and implementation of the Computer Systems and Programming Languages

Certification

Academic Projects

- *Movie List (May 2022)*

- Objective:** The goal of the project was to develop an application that would give the movie we look for using web api through the input given by the user.
- Tools:** HTML, CSS, JAVASCRIPT, ReactJS and Bootstrap-React.
- Duties:** This was a class Project in the Bootcamp, Dented Code Academy. Well, I have completed this project from Scratch and have deployed on the Vercel, a free hosting platform.
- Outcome:** It took few days to complete this project and I am very optimistic about the outcome. I have learned many different skills and have implemented. The application was built to display the movie as per request. I have used movie API to fetch the data and displayed it. I pushed the application to the GitHub and hosted using Vercel.
- Result:** It's a fascinating application and further did more projects on React.

- *Not-TODO List (June 2022)*

- Objective:** *The goal of the project was to develop an application that would give user the luxury to add different tasks on different categories and switch between them.*
- Tools:** *HTML, CSS, JAVASCRIPT, ReactJS and Bootstrap-React.*
- Duties:** *I have completed this project from Scratch and have deployed on the Vercel, a free hosting platform.*
- Outcome:** *It took few weeks of time to complete. I have learned many skills through the project. It is a not-to-do-list with two table that has the entry list and the bad list. In simple term, it is a to do list in opposite which tells us what not to do. It is build using React, Bootstrap-React and customized CSS. I have pushed the application to the GitHub and hosted using Vercel.*

Result: It's a fascinating application and further did more projects on React.

- ***Expenses Tracker (June 2022)***

Objective: The goal of the project was to develop an application that would help user to record their income or expenses. It was a multiple user application where multiple users could sign up and keep record of their income and expenses.

Tools: HTML, CSS, JavaScript, ReactJS and Bootstrap-React, Nodejs, rest API and MongoDB and few other NPM packages for password verification, email notifications and many more features.

Duties: I have completed this project from Scratch and have deployed on the Vercel, a free hosting platform.

Outcome: The users could keep record of their income and expenses with full history of date and categories. They could also update their account details and change passwords.

Result: It helped to gain few knowledge about applying multiple user feature in the applications, making profiles more secure, working on password verification and many more.

- ***Down Syndrome Queensland (Sept 2022)***

Objective: It is a real-life project I developed for Down Syndrome Queensland. It was a part of the curriculum that we develop a programme for a real client upon their request and necessities. It has already been handed to the client, but I am still voluntarily working to make it better.

Tools: The languages used are HTML, CSS, and JavaScript. SASS was used for the CSS compilation.

Duties: I have completed this project from Scratch and have deployed on the Vercel, a free hosting platform.

Outcome: The main feature applied was event booking with the help of the calendar. The organization organizes different events on different dates, and the events were supposed to have different individual links and those links to be inserted on the calendar on the specific day the event is on.

Result: It provided me with an opportunity of working with a real client. I had a nice opportunity to see what could go wrong while taking a project ahead with a real client and what should be done to avoid those mistakes.

Few other projects I have done can be found in my portfolio website.

Employment History

- **Employer:** Blue Bar On 36
 - **Post:** Bar Back
 - **Responsibilities:** Collecting glass and plates from the tables, washing, wiping and putting them in their respective place, filling the juices used in the bar and filling the fridges, helping bartenders in preparing the necessary items for the bar, getting them the spirits from beverage store when we run out of that in the bar, doing the stock of the deliveries of the items for the bar and other tasks to run the bar.

- **Working period:** 12/2021 to present.

Hobbies and Interest

Fishing: I love fishing since childhood. It is always entertaining to me. It is one of the recreational activity I often do.

Movies and series: I love watching movies sometimes. Comedy is my favourite genre. I love the humour used in comedy. More than movies, I am now days much interested on series. I also love to watch football on sports.
